PROFESSIONAL EXPERIENCE

Phone2Action | Full Stack Developer | Arlington, VA   JUN 2019 - JAN 2021
- Optimized public-facing campaign pages that handled 6 million requests per month by refactoring PHP and storage retrieval calls resulting in over 600ms page load speed improvement.
- Designed and implemented a process to autocorrect misstyped email addresses for >10 million inputs using MySQL, SQL, Redis caching and PHP; satisfied multiple important customers.
- Implemented new settings to allow customers to configure their campaigns to split input by first and last name using PHP and Vue.js, resolving a persistent issue for customers across hundreds of campaigns.
- Built two UI dashboards for campaign targeting and scheduled segment export reporting pages using Vue.js, Vue Router, Vuex and CSS.
- Wrote more than ten technical documents and process flows in the Confluence wiki, enabling better knowledge sharing, increased visibility into internal processes and faster onboarding for new team members.
- Resolved > 90 Jira tickets per month as a member of the technical support team by using SQL, PHP, Papertrail, New Relic, Javascript and CSS, resulting in happy customers and reduced churn.

Stitch Labs | Software Engineer | San Francisco, CA   DEC 2017 - FEB 2019
- Built five integrations between 3rd Party Logistics providers and the Stitch Labs API using Node.js Hapi framework, ES6, MongoDB, Angular.js and Test Driven Development (TDD) with 80% test coverage.
- Built internal tools for the support team and fixed customer-facing bugs using Laravel, PHP, Angular.js and Javascript that reduced the time it took to resolve issues by up to six hours per week.

Mondo | Sr. Technical Recruiter | San Francisco, CA   JAN 2016 - JUN 2017
- Made full time and contract placements for DevOps, Software Engineering and Digital Marketing jobs using recruiter outreach, cold calls and cold emails that resulted in over $1 million total revenue.

Proteus Digital Health | Javascript Developer (Contract) | Redwood City, CA   JUL 2015 - OCT 2015
- Built out a dashboard for patients and doctors to show the output of an ingestible sensor using Angular.js, Javascript and CSS.

PROJECT WORK

Employbl | employbl.com   JUN 2018 - PRESENT
Employbl is a web app for candidates to discover tech companies, startups and job listings.
- Built and deployed login flow and candidate dashboard using Laravel, PHP, Docker, Auth0, Vue.js, Vuex resulting in >600 candidate signups.
- Built data pipeline using PHP, Guzzle, PostgreSQL, Diffbot API, Lever API and Greenhouse API to host information about >5,000 companies and >4,000 active job listings updated regularly.
- Built blog and wrote technical blog posts using Laravel Nova, SEO, technical writing skills resulting in >5,000 unique sessions per month.
